SACCADE ANALYTICS

Isabel Galiana
CEO, Saccade Analytics

BIO

Entrepreneur, ex-professional volleyball player, geologist and technological innovation economist by training, Isabel is a pragmatic and driven leader focused on value-based objectives. She believes in empowering her team to challenge traditional approaches to MedTech development and commercialization. Isabel is a Canadian and Spanish national, and is fluent in English/French/Spanish and Portuguese.

ABSTRACT

Saccade Analytics began in 2016 with Dr. Mimi Galiana, whose research at McGill University led the field of eye and head movement analysis for over 30 years. She came to understand that although her work had tremendous potential, much more was needed before it would help patients. With this goal, she founded Saccade Analytics and recruited Isabel Galiana to assist in building the business. Since then, the company has grown under the mission to improve the standard of neurological care by translating advanced research into accessible tools.

This seminar is part of the Innovation Seminars series, a component of the “CREATE: Industry-Ready talent for Canadian MedTech” program at McGill and Ryerson. The Innovation Seminars showcase industry challenges and opportunities faced by individual Canadian MedTech companies. They are delivered by industry representatives from partnering companies and highlight the need for multi-disciplinary approaches to solve specific industry challenges. The seminars are held at both Ryerson and McGill, and are shared virtually to allow students to participate at both institutions.
